In order to reduce the risk to business in the event of system disruptions, the Registry has developed a business continuity plan which endeavours to ensure that critical operations continue to be available during any disruptions. It includes plans, measures and arrangements to ensure the continuous delivery of critical functions and services to customers and a disaster recovery system to minimise data loss. Environmental Protection

The Registry takes sustainable development and environmental protection seriously. We are committed to maintaining a high level of environmental awareness among staff members and pursuing environmental protection through adoption of environmentally friendly technologies, minimisation of possible adverse impact on the environment and continuing to enhance the Registry's environmental friendliness. Our goal is to improve the air quality, reduce power consumption as well as recycle and reduce waste. During the year, the Registry continued to reduce consumption of energy and paper, and implement green procurement by purchasing green products and reduce the use of one-off disposable items. In 2012, all targets for key green measures were fully achieved by the Registry. Details of these can be found in the electronic copy of the Environmental Report 2012 on the Registry's website.

The electronic services for submission of specified forms under the new Companies Ordinance are being developed and would be completed in 2013. With the increasing use of the electronic services at our e-Registry, we believe that there will be further reduction in the use of paper by the Registry and the business community.

On air quality, the Registry has obtained a rating of "Good Class" under the Indoor Air Quality Certificate Scheme of the Environmental Protection Department. To further improve our air quality towards a better working environment, office plants are placed in the corridors and common areas of the Registry's offices from early 2013.
